

## **Sample System Architecture Process Flowcharts**

There are seven flowcharts provided in this folder that comprise the corporate- or organizational-level PRC system architecture process. You will note the connectors to the PRC requirements process. As discussed in Chapter 6, it is necessary to iterate the system requirements and the system architecture repeatedly. We've learned that the physical architecture of a system influences and changes the requirements. Several recommendations for how to do this, and guidelines for "architecting" are provided in Chapter 6.
